Here are the latest release notes Version 10.0 (Current Release):

360 View Creator Version	Release Notes	Release Date
10.0.30038	• Fixed player menu buttons colorization • **Added 'Invoice number' field inside the license registration window**	May 6th, 2021
10.0.29942	• Fixed the license UI controls, from not showing properly	April 14th, 2021
10.0.29866	• **Updated the regex for the registration email to accept one or more characters of the defined type at the end of the rule, thus enabling long domain names**	March 26th, 2021

10.0.29684	• **Added an auto-closable Toast-like message dialog for the project save confirmation message** • **Added checks for save project dialog** • **Added success message to save project dialog** • **Address the close button from the not valid project message dialog** • Fixed reopen the load project dialog when selected a directory which is not a project	February 9th, 2021
10.0.29656	• Fixed the update download link • Fixed the help and welcome links	February 5th, 2021
10.0.29643	• Fixed the license expiration dialog • Fixed the mp4 blocking issue • Fixed sorting by date • Fixed 'don't check for updates' when license is expired • Added an exit project Save confirmation dialog	February 1st, 2021
10.0.29599	• Saving the base member variables for JS before saving projects • Fixed when users set larger output sizes than the imported original images	January 24th, 2021
10.0.29593	• **Changed the update logic to read the major, minor and 'changelist' values from the server version**	January 21st, 2021
10.0.29575	• Fixed the Project dropdown menu • Fixed the Load Project default look directory • Fixed the Auto Preview • Fixed the Multiple hotspot type popup issue • Fixed the Project Save on macOS • Fixed the first image when bouncing is enabled • **Moved the Update Server to stream.iconasys.com** • Fixed the Help and Options dropdown hidden menus	January 19th, 2021
10.0.29505	• **Added Dynamic size MP4 function for users that want to separate scripts from the video. This allows users to use one java script for multiple interactive MP4 videos. Previous version required a fixed MP4 size** • **Added new feature: Enable/Disable Instructions Overlay for 360 animation** • **Added projects (new, save and load projects)** • **Added one rotation js file for HTML5 and Interactive MP4** • **Added the possibility to import your custom hotspots** • Fixed multiple outputs issues • Fixed UI for small resolution screens • **Added up/down arrows in the Player menu for Multirow views**	December 14th, 2020

Here are the latest release notes for Version 6.1 (Beta):

360 View Creator Version	Release Notes	Release Date
6.1.29490	• Added **Dynamic size** MP4 function for users that want to separate scripts from the video • Added new feature: Enable/Disable **Instructions Overlay** for 360 animation • Added projects (**new**, **save** and **load** projects) • Added one rotation JS file for HTML5 and Interactive MP4 • Added the possibility to import your **custom hotspots** • Fixed multiple outputs issues • Fixed UI for small resolution screens	December 10th, 2020

Here are the latest release notes for Version 6.0 (Released):

360 View Creator Version	Release Notes	Release Date
6.0.29366	• Minor fix for Interactive MP4 hotspots	October 13th, 2020

6.0.29226	• Small fixes for the Interactive MP4 projects • Fixed fullscreen issues with wide angle images	August 10th, 2020
6.0.29166	• Fixed the bug involving unwanted rotation on hotspot dialog open event • Fixed the mobile scroll option	August 5th, 2020
6.0.29158	• Added a new font manager, now users can choose different hotspot fonts for titles • Reimplemented the main loading screen with modularity and new project loading themes • Implemented a loading screen for zoom with CSS pseudo elements • Implemented mp3, mp4, Youtube, Vimeo, 360 media hotspots • Added x, y coordinates to edit and place the hotspots in a more precise way • Added hotspot pulse animations • Fix hotspot templates not being saved on exit • Implemented mobile scroll toggle • Fixed the PNG transparency issue in the HTML5 Canvas • Made the html files and the hotspot file UTF-8 encoded	July 27th, 2020

Here are the latest release notes for Version 5.0:

360 View Creator Version	Release Notes	Release Date
5.0.29045	• Small bug fixes on macOS systems	June 28th, 2020
5.0.28895	• Internal hotspot action updates	May 19th, 2020
5.0.28851	• Fix zoom with multi-row images	May 5th, 2020
5.0.28769	• Added new custom speed duration value of 1 second	April 8th, 2020
5.0.28575	• Fixed auto-updates	February 10th, 2020
5.0.28547	• Renamed the Alpha blend feature to Swoosh • Fixed Swoosh function	February 4th, 2020
5.0.28488	• Possibility to extract crash reports in a more efficient way	January 20th, 2020
5.0.28468	• Fixed multiple outputs to be created in separate folders • Fixed the space between player menu icons	January 15th, 2020
5.0.28445	• Switched implementation to Canvas. The HTML5 Canvas viewer enables hardware acceleration and smooth interaction on very large image sets. This change is mostly prominent on mobile devices, because it will take advantage of the GPU to render the images, instead of updating the DOM tree with the source paths of the images. • Added User options area - input and save credentials for the 360 Server • Added reminder about license expiration • Added Multiple Outputs - user has now the ability to export multiple project outputs • Ability to change GIF rotation direction • Added incremental zoom option • Ability to set a fixed hotspot position on all frames • Added alpha blending transition option in advanced settings menu • Fixed crash when transferring images from ShutterStream to 360 View Creator • Ability to select Start position when image is rocking 180 (not full 360)	December 17th, 2019
